

Amendments to the Abstract

Please replace the Abstract of the Disclosure at page 46 with the following.

An image pickup apparatus includes an image pickup unit, an interface, a reproducing unit, a designating unit, a display control unit and a printing control unit. The image pickup unit obtains a digital image. The interface connects to a storage medium which stores the digital image obtained by the image pickup unit, while the reproducing unit reads out the digital image stored in the storage medium via the interface and causes a display apparatus to display the read-out image. The designating unit designates the image displayed on the display apparatus as a print subject for an external printer communicating with the image pickup apparatus. The display control unit causes the display apparatus to display a print setting screen, in accordance with a first designation provided to the designating unit. The printing control unit instructs the external printer to print the image displayed by the display apparatus, in response to a designation provided to the designating unit successively to the first designation.
